

OVER THE POCONOS

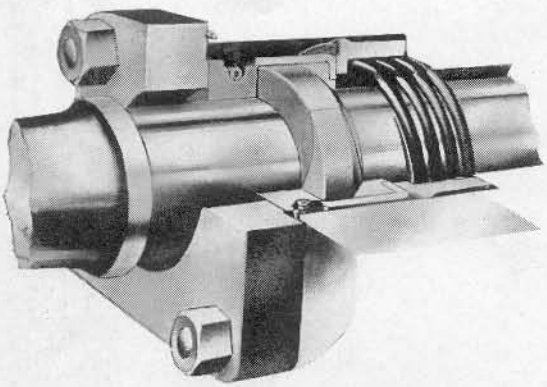

KING SANDER

DESIGNED for either fast freight or heavy passenger service the twenty new Pocono type locomotives just delivered to the Lackawanna Railroad are among the most efficient and powerful engines that ever hauled a train through the mountains for which they are named.

"Hold 'em on the rail and they will run away with anything you hook behind 'em" stated one of the engineers. Naturally a dependable Sander is a vital piece of equipment on a locomotive which will draw such a colorful description from the man in the right side of the cab.

But, as long as there is any sand in the boxes these new conquerors of the Poconos will always be supplied with a sufficient amount for a firm grip on the rail — **King Sanders** will take care of this job without trouble or maintenance.

KING PISTON ROD PACKING

King Metallic Packing insures steam tight operation of the piston rods and valve stems. Its long wearing qualities will help to keep down to a minimum the maintenance cost of this new power. Applications on some of the largest and most powerful locomotives in the country prove its ability to meet the severe operating conditions of today.
