

He keeps a load of freight from sticking its neck out!

Here is an Erie Clearance Engineer at work.

He is making certain that a huge, oversize shipment will travel safely through tunnels, under bridges, around curves.

On-the-spot measurements like this are frequently necessary. Sometimes, specially designed blocking and bracing is needed. And Erie Clearance Engineers are even consulted while huge machinery is still in design stage,

to make recommendations on the assembly of the shipment to insure effective rail handling.

Because the Erie has the highest and widest clearances of any railroad between New York and Chicago, the Erie has become known as the "heavy-duty" road.

It's specialized skill and services like this, handling shipments, large or small, that make more and more shippers say "Route it Erie!"
