

It wasn't raining when Noah built the ark

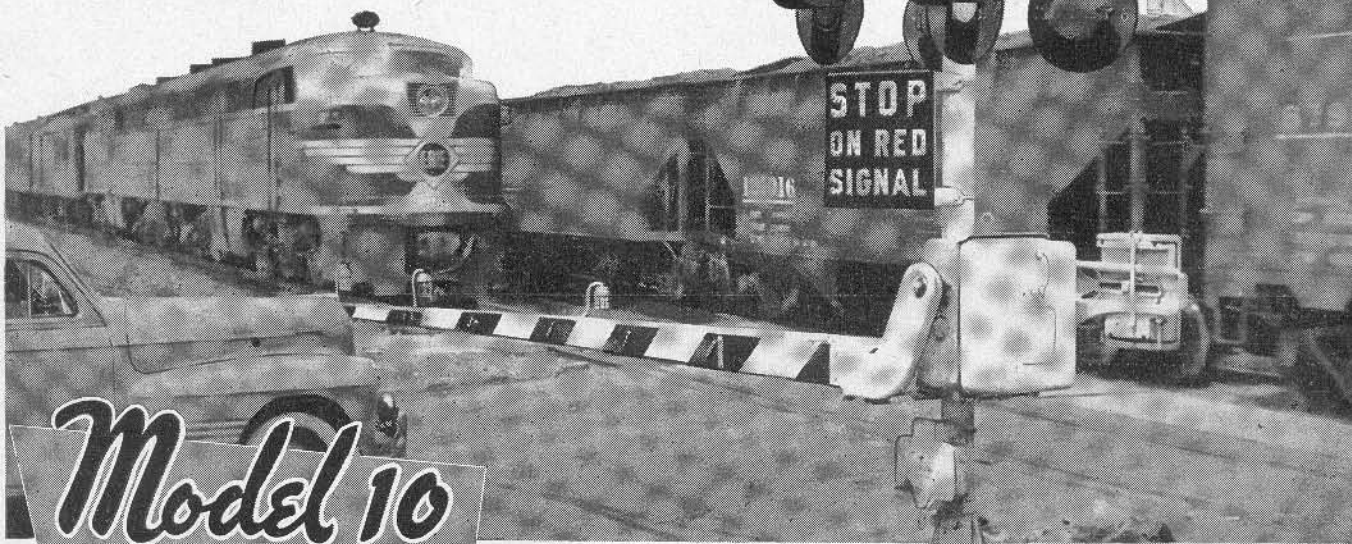

... but when the flood came,
preparedness saved the day!

Unprotected grade crossings, too, present a hazard that can be eliminated by preparedness—the right kind of protection.

Attacking the grade crossing problem realistically, a hundred railroads, since 1936, have adopted Model 10 Automatic Signals as a means of accident prevention.

The phenomenal lifesaving performance of these signals is best shown by their record: Thousands of Model 10's are in service at busy crossings, yet not a single accident has ever occurred as a result of operation failure.

Pat. in the
U.S.A. and
in Canada.
