

ERIE'S RADIO-TELEPHONE SYSTEM now covers entire mainline between New York and Chicago!

● Think how this modern communication system improves railroad performance, speeds up service and adds to Erie's fine record for safe, dependable transportation. For here's split-second communication between caboose and diesel locomotive, or between wayside stations and moving trains or a combination of all together.

This is the first complete mainline radio-

telephone installation on any American railroad and another of Erie's famous "firsts"! This improvement is typical of Erie's progressive railroading—building a better railroad for the safe, dependable transportation of passengers and freight.

Erie's newly completed radio system makes the railroad more than ever ready to serve our country well in peace or war.

Erie Railroad

SERVING THE HEART OF INDUSTRIAL AMERICA
