POWER...68 Billion Kilowatts of it!

During a recent year, the six states of Illinois, Indiana, Ohio, Pennsylvania, New Jersey, and New York produced over 68 billion kilowatt hours of electric power. That's a tremendous amount—well over 40% of America's *total* annual electric power output. But, great as it is, that huge volume of power is not surprising. For the Erie Area is an area of "greats".

Great Natural Resources—Coal, oil and gas, iron and steel, salt, plastics ingredients, and many other raw materials—are available for industry.

Great Markets—34% of America's population, doing 40% of the Nation's retail purchasing, live in these six states.

Great Labor Forces—Now producing over 42% of America's war materials.

And, offering unexcelled transportation throughout this Industrial Heart of America, is the Erie Railroad, providing safe, dependable transportation for every type of raw material and finished product.

For further information, and your free copy of the Erie Industrial Map, write George F. Weston, Industrial Commissioner, Erie Railroad, Midland Building, Cleveland 15, Ohio.
